Panasonic

Sunset For PCM/TDM

If you are still considering PCM/TDM based EPABX just because of "Brand Value" ….. Remember !!!! **Siemens/ Panasonic / Samsung** did not quit this space due to lack of market or not a powerful Brand, but realised the emergence of IP based products can virtually eliminate entry barriers and handle the new age communication requirements better than their own products.

Non Proprietary Hardware & Accessories !!!

- Base hardware is a computer, with no proprietary hardware you can self maintain & cost effective
- To Connect Analog extensions FXS are connected outside system using Switch in the same network
- To connect Analog Trunks / PRI trunks you use non proprietary hardware of your choice
- Wide variety & cheaper Ip Phones that suits your need & budget vs a few proprietary expensive KTS
- As all are connected outside the system(computer) every failure is local & separate & fail proof
- Low procurement cost & High reliability of these hardware makes it reliable & cost effective

Expand as you grow from any size to any size !!!

- "Extension is just a Number" to configure with no hardware, can expand from 50 to 5000 as you grow
- Adding "Trunks" is adding an appropriate gateway in the network. Unlimited in size & options. SIP, PRI, GSM, Volte & Analog Trunks
- Adding Analog Extensions is just Adding FXS & configuring in the network
- Your Investment today is your "Final Investment" on EPABX irrespective of size you grow in the future

Distributed & Cluster Free Termination !!!

- 80% EPABX complaints are due to cabling, gets eliminated making absolutely trouble free
- In large campus distribute & Connect FXS with network cabling than clustering multi pair cable
- As this can effectively use your data network for Ip Phones reduces the cabling need and can be better managed with ease

Spreaded Wings with Multi Location / Cities !!!

- The above is a case study of Cars India - Chennai, the largest Maruthi dealer at Chennai
- 7 PRI & 9 EPABX at all location, reduced to a Single EPABX & 2 PRI and a saving of 1.5 lakhs/month
- Not just cost saving but convenience of being connected in the same network
- Apart from monthly recurring cost saving, it also brings in additional yearly savings due to reduced or near nil maintenance cost

Public Address System (PA System) !!!

- No Need for separate cabling for creating PAS, as SIP gateway can be connected to any nearby switch
- SIP Gateway will give an output of 20W that can be connected to any speaker available in the market, amplifier can be connected if 20W is not enough
- No Need for any separate Speaker Station, as announcement can be initiated from any extension
- We can call and address individual speaker or group of speakers or all speakers simultaneously
